A unique machine for all your capsule sizes

The Universal Filler is composed of a unique and robust frame and colour-coded plates sets corresponding to different capsule sizes.

- One single frame for all capsule sizes.
- Only metallic plates and frame.
- Fill capsule sizes 000, 00, 0, 1, 2, 3 and 4.
- No adjustment necessary.
- 120 capsules at a time.
- Possibility to fill less capsules with the Modular Powder Stop.
- Extra space to fill the capsules.
- Very robust design.
- Easy to wash.

2. Safety information and disclaimer

All material should be cleaned before every use (refer to section 5).

Many parts are heavy and might cause injury if mishandled or in case of fall.

Always work on a stable and flat surface, at a height that is comfortable to work while standing. Have sufficient free space around the machine that you are working with.

As the filling is manual, results may vary depending on the user. Other factors can influence the results such as but not limited to: type of power, number of tamps, filling weight, capsule size, vibration type and intensity. It is the responsibility of the user to make sure the prescribed dose is respected. Feton International is not responsible for wrong dosing.

Illustrations, descriptions and specifications are not contractual and are subject to change without prior notice.

Feton International sprl declines all liability in the event of improper use of its products.

- 3. Technical data
- 3.1 Components list and Materials

Item N°	Quantity	Name	Material
1	1	Frame	316 Stainless Steel and Anodised Aluminium
2	1	Spacer Plate	316 Stainless Steel
3	1	Bottom Plate	316 Stainless Steel
4	1	Filling Plate	316 Stainless Steel
5	1	Top Plate	Aluminium Durni-coat 520 Electroless Nickel
6	1	Capsule Loader (optional)	POM, PMMA and 316 Stainless Steel
7	1	Modular Powder Stop (optional)	РММА
8	1	Tamper 120 pins (optional)	POM
9	1	Serial Closer (optional)	POM

3.3 Colour codes

Each set of plates, used for one specific capsule size, is composed of:

- 1 Spacer plate;
- 1 Bottom plate;
- 1 Filing plate;
- 1 Top plate.

Each plate is identified by a coloured label corresponding to the capsule size.

Colour	Capsule Size
Red	000
Black	00
Orange	0
Blue	1
Yellow	2
Green	3
Brown	4

4. How to use

NOTE : Operate your capsule filler at least one time without filling the capsules (steps 3-4-5-8) at the start of every preparation. This will allow you to check that everything is working correctly.

See table below for visual instructions.

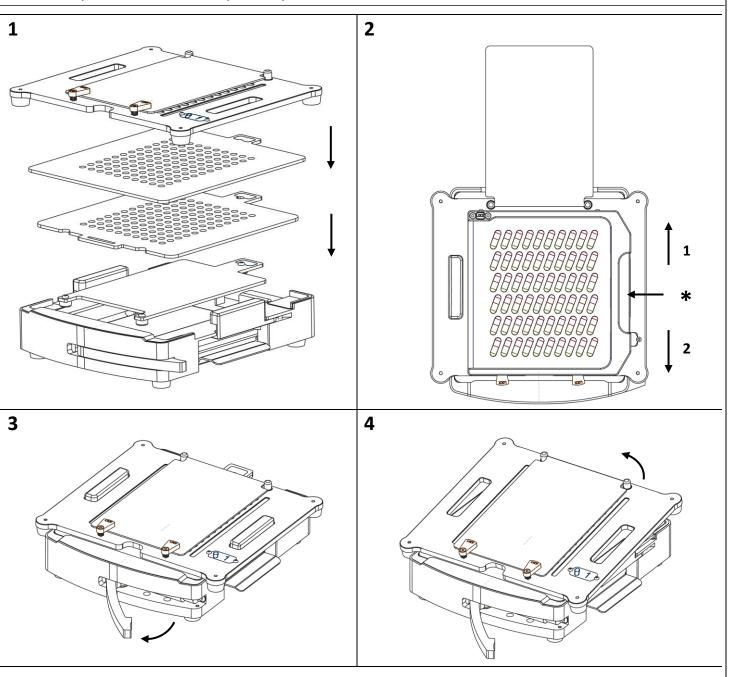

- 1. Prepare your material: choose the right set of plates for the capsule size you are using. Install the plates in this order: Spacer plate, Bottom Plate, Filling Plate, Top Plate.
- 2. If you have a capsule Loader, please refer to the Loader datasheet for instructions. If you do not have a capsule Loader, place the capsules into the Top Plate one by one.
- 3. Pull the Lever to lock the capsules' bodies.
- 4. Pull the Top Plate upwards, starting from the back side for easier separation.
- 5. Release the Lever. If needed, push on the capsules' bodies so that they are flush with the Filling Plate.
- 6. Fill the capsules. You can move the side locks to have more space to spread the power. You can also use the Modular Powder Stop to prevent powder loss or to fill less than 120 capsules.
- 7. If needed, you can use a Tamper to push the powder into the capsules to be able to fill a higher volume.
- 8. Place the Top Plate. Pull the Base Plate to push the capsules' bodies into the capsules' heads. The capsules are now "pre-closed".
- 9. Take the Top Plate and turn it upside down on your table. If you have a Serial Closer, use it to close the capsules in one motion. If not, close the capsules by hand.
- 10. To push the capsule out of the top plate, open the lid and place the top plate on a spacer plate.

5. How to wash

It is important to wash the parts in contact with the capsules or the powder thoroughly between each use to avoid contamination. Washing can be done by hand, in a dishwasher or in an autoclave.

If done by hand, use warm water and soap.

If done in a dishwasher :

- All metal parts : Use a maximum temperature of 110°C/230°F.
- All plastic parts : Use a maximum temperature of 40°C/104°F.

If you have difficulty cleaning the inside of the holes of the plates, use the small Feton-cleaning brush.

Note for aluminium parts with Durni-coat 520 Nickel treatment : top plates, Universal frame

If done in a dishwasher or in an autoclave, <u>do not use</u> alkaline or acid cleaning product that are <u>not suitable</u> for treated aluminium (nickeled or anodized), as they oxidize the surface treatment of the plates which could deteriorate or change color.

Example of unsuitables products :

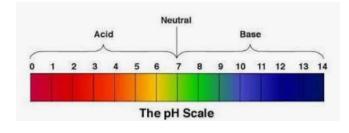

- Alkalines : Alkaline detergent
 - For anodized parts not suitable for ph > 7
 - For nickel plated parts alkaline is suitable
- Acids : Hydrogen peroxide
 - For anodized parts not suitable for ph < 4
 - For nickel plated parts not suitable for ph <7

In general, use cleaning products whose ph is neutral.

Please refer to the technical datasheet of your cleaning product to check whether it is suitable or not.

Note : Just because the surface treatment has changed color slightly does not mean the plate is eligible for a return under warranty.

Ph-scale:
